

Corporate Health Reports:

Outline

FORD HEALTH

This information is supported by two other documents:

1. Corporate Health Report Content
2. Corporate Health Report Specifications

STANDARD REPORTS

Standard Snapshot Report – 6 page report

A Standard Snapshot Report provides a brief and broad overview of the current health risks of a company or group. This report is recommended:

- for initial or interim reporting
- as part of ongoing evaluation of health programs and targeting
- for final reporting for smaller companies or groups of participants (n=30 to 50).

A Standard Snapshot Report does not include comparisons over time or evaluation against a comparison group for benchmarking.

Standard Summary Report – 28 page report

A Standard Summary Report provides an overview of the health risks of a company or group, including graphs and interpretation of each health risk. The willingness of participants to change their lifestyle health risks is documented. Recommendations are made regarding targeting health programs based on health risks.

This report is recommended:

- for final annual reporting
- or at the end of the health program cycle to assist with outcome evaluation
- or as requested to suit programming requirements and evaluation and/or budgeting plans.

A Standard Summary Report includes benchmarking of one data set against a standard Ford Health Comparison Group.

Standard Comprehensive Report – 32 + page report

A standard comprehensive report provides an overview of the health risks of a company or group, including graphs and interpretation of each health risk. The willingness of participants to change their lifestyle health risks is documented. In addition to the risks reported in the Standard Summary Report, it reports on the length of employment, risk of burnout (long working hours and limited annual leave), and self rated performance (if module is completed by client). Cost:benefit analysis can also be completed for those clients who complete the performance module

A Standard Comprehensive Report is recommended:

- for organisations whose programs have more than 500 participants
- for final annual reporting
- at the end of the health program cycle to assist with outcome evaluation

- as requested to suit programming requirements and evaluation and/or budgeting plans.
- for clients who have a comprehensive and/or long standing health program
- for clients who are required to demonstrate cost:benefit of their program – currently only for those who complete the performance module.

A Standard Comprehensive Report includes benchmarking of one current data set to a demographically matched Comparison Group. The Comparison Group will be matched on gender, age and job category (in that order).

CUSTOMISED REPORTS

The Standard Summary Reports and Standard Comprehensive Reports can be customized for the client at additional cost. Customisation may include:

- additional variables to the standard set (see supporting document 'Corporate Health Report Content')
- additional client data sets from consecutive years for the comparison of health profiles over time
- more than one data set for that year based on Custom Fields 1 and 2 (set up at beginning of program eg location, business unit, job description, assessment type).

FURTHER REPORTS AVAILABLE

Health Coaching Report: to demonstrate the degree of behaviour change observed throughout the Healthy Change Program. Delivered 10 months after Healthy Change Program is initiated. Cost or inclusion to be determined.

Comparative Report: to demonstrate the degree of change in health risks between assessments for a client who has completed at least 2 rounds of health risk assessments. Cost to be determined.

Participation Reports: an excel spreadsheet, ideal for larger programs and monitoring of participation. Cost to be determined.

Skin Cancer Screening Report: to demonstrate the participation in the program, the referrals made for further treatment and recommendations for further programs or interventions for the organisation. Cost to be determined.

Biometrics only report: for those clients who complete a biometrics only program or Healthy Hearts program (or if insufficient individuals complete the online questionnaire). To be included in cost of program.
